## **DETAILED ACTION**

### ***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance: In response to the office action dated 02/22/08, further in view of applicant's amendments filed on 05/21/08, the application has been carefully reviewed and respectfully considered. Claim 1 is currently being cancelled. Claims 2 and 5-7 are currently being amended, whereby the features of now-cancelled claim 1 have been incorporated into claim 2, as well as other features added to that claim (and whereby claim 2 is now placed in independent form and claim 10 is currently added.

According to applicant's remarks based on currently amended subject matter, as discussed in page 5 through 6, has been found persuasive, the rejection has been withdrawn, and therefore, independent claim 1 has been allowed, for the reasons given below, including all dependent claims depend on therefrom:

With respect to claims 2-10, the prior art searched and of record neither anticipates nor suggests an image forming apparatus comprising: an interface which receives a job of requesting an accelerator function, from the outside; a processing path decision section which determines whether a first image processing path to perform image processing in a copy operation overlaps a second image processing path to perform image processing in the execution of the accelerator function, which has a

lower priority than the copy operation, in the Job received via the interface; a storage section which stores a management table to manage waiting jobs unable to execute the accelerator function; any a search section which searches the management table for a job where the first image processing path does not overlap the second image processing path to perform image processing in the execution of the accelerator function in the waiting jobs; and an image processing section which performs image processing in a copy operation and image processing in the execution of the accelerator function at the same time, when the processing path decision section determines that the first image processing path does not overlap the second image processing path, in the case where a request is made for the execution of the accelerator function in the job received via the interface in a copy operation, wherein section when the processing path decision section determines that the first image processing path overlaps the second image processing path, the image processing section registers the job received via the interface in the management table as being one of the waiting jobs unable to execute the accelerator function, and executes a job searched for by the search section.

Therefore, claims 2-10, are Allowed for the reasons the claimed invention are distinct from the prior art searched and of record neither anticipates nor suggests the claimed invention alone in combination as amended.
